Experience with Git branching and merging

In this assignment, I worked with Git branching and merging. I created two branches, `feature-1` and `feature-2`, and made changes to a file called `shared.txt` in each branch. Merging `feature-1` into the main branch was easy, but when I tried to merge `feature-2`, there was a conflict. I had to fix the conflict by editing the file. After that, I pushed the changes and deleted both branches. This helped me understand how Git works when there are different changes in separate branches and how to solve conflicts.
